

CASE STUDY:

Worked with a access control manufacturer for a solution for Police evidence lockers

THE CHALLENGE(S):

- Customer was looking for an electronic means to secure stored evidence
- For some locations the solution had to be retrofitted into the existing lockers and others from the factory
- Required a way to visually monitor the locker availability
- Customer required an audit trail to show who had placed evidence and/or accessed the evidence lockers

THE SOLUTION:

- Using our 3513DM (Dual Monitoring) cabinet lock with the manufacturer's access control system, we were able to integrated the evidence lockers with a locking solution that not only fit the customers needs, but also provided the crucial auditing capabilities needed to monitor access.

BENEFITS OF SOLUTION IMPLEMENTED:

- The size of the 3513DM made it an ideal installation due the various sizes of the lockers.
- The dual monitoring feature provided feedback to the manufacturers access control system of the lockers status (Available-Unlocked, In Use-Locked, Open)
- The integration of the manufacturer's access control system and our 3513DM, provided the Customer with control and audit recording.
