

CASE STUDY:

Working with a Case woodworking company to provide a retail chain with a means to lock and monitor their cell phones, computers & tablet devices.

THE CHALLENGE(S):

- The application required the lock to have proximity reading capabilities as well as the ability to function when blocked by the cabinet door.
- The Customer was looking for a lock that was simple to use in a fast pace environment, which allows multiple employees to quickly gain access to the inventory.

THE SOLUTION:

- Provided the 3590 Lock N' Prox to secure the display cabinet doors and accommodate the request for a proximity device.

BENEFITS OF SOLUTION IMPLEMENTED:

- The chosen lock provides reliable reader functionality through 20mm of wood or other non-metallic material without a visible external antenna.
- The spring-open catch release allowed the employees to quickly gain access to the stored merchandise.
- Having a built in proximity reader allowed for the programming of up to 50 keys, so staff did not have to rely on a master set of keys to open each cabinet.
- The battery powered Lock N' Prox provided the simplicity required for staff to quickly access products for Customers.
