

THE APPLICATION:

Worked with an end user and a fixture manufacturer to secure its high value stock, which was in close proximity to its display cases

THE CHALLENGE(S):

- Wanted the door to automatically lock when the cabinet was closed
- Pre-existing displays and set up created an issue with the cost of running wire through the store to power electrified locks

THE SOLUTION:

- 3511 battery operated cabinet locks with i-Button® were customized with additional 12" reader wiring.

BENEFITS OF SOLUTION IMPLEMENTED:

- Timed re-lock (5 sec.) in the 3511 ensured cabinets were secured when closed
- The convenience of using a battery powered solution, eliminated the pre-existing electrical requirements for locking cabinets
