

### THE APPLICATION:

A high end retailer was looking for an electronic locking solution as a means to secure the inventory in their cabinets.

### THE CHALLENGE(S):

- The Customer wanted one key to unlock all openings within each display unit
- Required cabinet openings to automatically relock when closed
- Required a visual status (open, closed, locked) of each opening

### THE SOLUTION:

- Developed a Universal i-Button® controller (USK15) to work with the 3513DM (dual monitoring) cabinet locks

### BENEFITS OF SOLUTION IMPLEMENTED:

- USK 15 controller fitted in each display unit, allowing authorized users to access and search all drawers for a specific time period
- A built in adjustable timer in the USK 15, relocked the drawers automatically
- Monitoring of the 3513DM's catch and bolt, along with the LED iButton® reader allowed quick visual confirmation of lock status
