

CASE STUDY:

Worked with a Designer on a project for a high end jeweller

THE CHALLENGE(S):

- Locking solution required to fit into small and tight spaces in custom made cabinets
- Customer had issues with the use of cam locks for security reasons
- Due to floating display case floor plan, running power to secure cabinets was not available as an option
- Needed to work with four subcontractors involved in manufacturing the cabinetry to find a common locking solution

THE SOLUTION:

- Pre-programmed the 3511 cabinet locks with ADD, DELETE, and USER credentials prior to in-store installation for customers immediate use

BENEFITS OF SOLUTION IMPLEMENTED:

- The slim size of the 3511 cabinet lock provided flexibility and simplified the installation for all sub-contractors' custom built cabinetry
- Unlike cam locks, the 3511's automatic relocking feature ensures cabinets are not left unlocked while unattended..
- The 3511's battery powered functionality provided the convenience of not relying on local power to secure cabinets.
