

**CASE STUDY:**

Working with a Case woodworking company to provide a retail chain with a means to lock and monitor their cell phones, computers & tablet devices.

**THE CHALLENGE(S):**

- The application required the lock to have proximity reading capabilities as well as battery operation due to limited access to power.
- The Customer was looking for a lock that was simple to use in a fast pace environment, which allows multiple employees to quickly gain access to the inventory.

**THE SOLUTION:**

- Provided the 3590 Lock-N-Prox to secure the display cabinet doors with the built in proximity reader.

**BENEFITS of SOLUTION IMPLEMENTED:**

- The chosen lock provides reliable reader functionality through the wood and glass display cases
- The cabinets were fitted with a spring-open catch which allowed the employees to quickly gain access to the stored merchandise.
- Having a built in proximity reader allowed for concealing the lock without compromising the security and aesthetics of the display cases keys, so staff did not have to rely on a master set of keys to open each cabinet.
- The battery powered Lock-N-Prox provided the simplicity required for staff to quickly access products for Customers without fumbling for mechanical keys
